In Support of Private Companies—

Helping Businesses Emerge from the Pandemic Crisis

Into Recovery and Growth—

The Essential Role of Private Companies in the Nation's Economy

The Sun Also Rises, the title of Hemingway's 1926 novel, characterizes our outlook today as the nation's economy begins recovery with the objective to progressively restore activity to pre-pandemic levels.

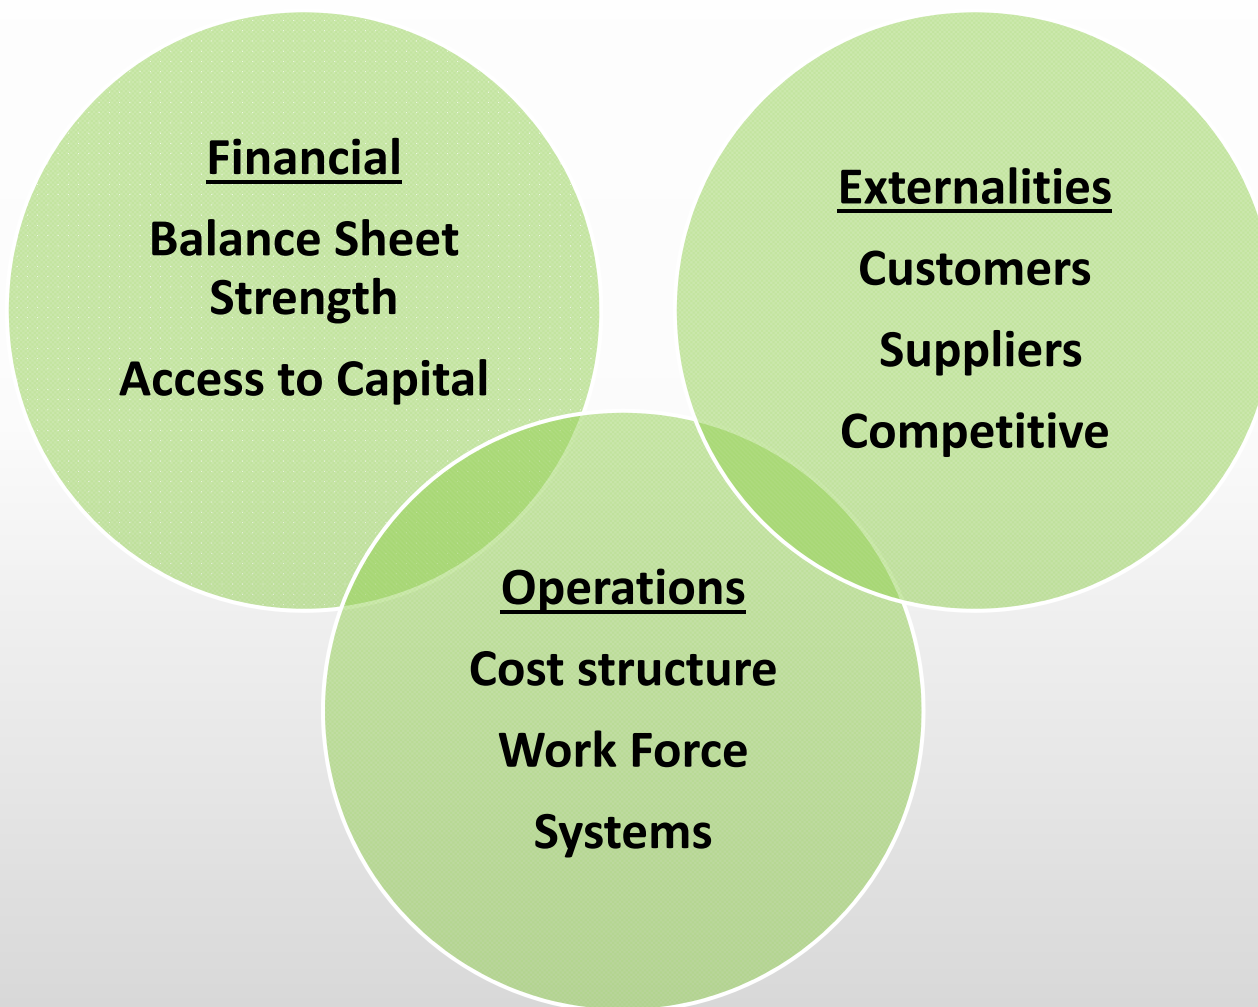

Private companies play a leading role throughout the economy, maintaining and creating more jobs than all the largest publicly traded companies combined because of their ability to innovate and react quickly.

And so, it is vitally important that this sector receives the support necessary as it recovers from the economic slowdown of 2020.

August 2020

Into Recovery and Growth— Spheres of Private Company Stresses

Into Recovery and Growth— Private Company Stresses

As we emerge from these past months of challenge, the condition of many private companies, particularly within the lower middle market, will be stressed to various degrees depending upon:

- **Balance sheet strength prior to the downturn,**
- **Variable cost management,**
- **Reactive fixed cost reductions**
- **Work force condition and recovery status**
- **Viability of customers and suppliers and their horizons to recovery**

Being private usually means such companies have more ***limited access to capital***, thus putting them at greater risk of stress or even failure.

Likewise, ***business acquisition and exit transactions*** often become compelling and necessary for survival and growth but present black-box type questions for management and ownership to address.

Into Recovery and Growth—Private Company Challenges Alternative Financing and Transaction Solutions

Financing alternatives for stressed private companies

- debt restructurings with current lenders,
- refinancings with new lenders,
- government loan programs (e.g. SBA, Federal Reserve), and
- strengthening of balance sheets with additional, patient capital, among other options, depending upon each circumstance.

Corporate transaction alternatives

- partial or complete ownership exit transactions,
- combinations with stronger industry partners or
- availing of favorable market conditions by pursuing strategic growth through acquisition.

Into Recovery and Growth— Solving the Financing Challenge

Debt Restructurings, Refinancings, Government Loan Programs

- **Restructurings, Refinancings and Balance Sheet Strengthening**
 - Existing Debt Restructurings—restructuring of existing lender term debt and working capital credit arrangements to provide adequate capital support through the recovery and growth phases
 - Lender Workouts/Refinancings—replacement of existing borrowing facilities with alternative lenders/lessors for continued financing in workout situations
 - Junior Debt/Mezzanine Capital--restructuring of the balance sheet with patient capital for added stability and strength through recovery and growth phases
- **Federal Reserve Main Street Programs**- three new Federal Reserve sponsored and Treasury backed programs to provide expanded capital availability to facilitate recovery and growth for lower middle and mid-market companies.
- **SBA Loan Guaranty Programs**—
